

Connections and special features of Omegon rotators

The three CAA rotators have slightly different characteristics compared to the two Pro rotators. See the table below for details:

Model	Internal thread (usually for telescope)	External thread (usually for camera/filter wheel)	Optical length
CAA T2 (#87375)	M42*0.75	M42*0.75	13.5mm
CAA M48 (#87376)	M48*0.75	M48*0.75	14mm
CAA M54 (#87377)	M54*0.75	M54*0.75	14mm
Pro M56 (#86756)	M56*0.75	M56*0.75 + 2" Plug diameter	
Pro M82 (#86757)	M82*1.0	M56*0.75 + 2" Plug diameter	

The **Pro Rotators** fit perfectly on the 2" focusers #85063, #85065 (M56) and the 3" focusers #85064 and #85066 (M82).

Only adjust the small Allen screws if the rotator is noticeably too easy or too difficult to turn. They should be adjusted very precisely.

The **CAA Rotators** are designed for light to medium-weight accessories and can be mounted wherever the connection and optical length allow.
